

HUGO

The Leitz HUGO lenses are designed to be small, fast, lightweight and as close focusing as possible with the full character of the Leica M lens glass creating character at capture. The initial set of 7 full frame lenses ranges from 21 mm to 90 mm, all T1.5, with 18 mm and 135 mm focal lengths to follow soon. There is a 50 mm T1.0 lens also available.

M GLASS CHARACTER

The Leitz HUGO lenses use the same glass as Leica M lenses to bring their rich colors, artful flares, and rounded image field into the world of moving pictures with uncompromising quality, durability, and flexibility.

READY FOR SET

Featuring a production-ready mechanical design, the Hugo lenses come with rigid LPL mounts, as well as the traditional cine orientation of focus and iris scales, expanded focus scales with a 270° rotation, and greatly increased close focus ability. Easily change mounts to Leica M mount or Leica L mount as well.

COMPACT AND FEATHER WEIGHT

New small, lightweight housings make for incredibly compact lenses starting at 1.78 lbs / .81 kg, and between 2.7 - 4.4" (68 - 112 mm) in length.

COMPATIBILITY

The optical design of some HUGO lenses includes a rear element that protrudes beyond the LPL mount into the body of the camera. Some camera systems and 3rd party LPL mounts do not allow safe use of these lenses.
