Both SDI&HDMI in Compact Size

The Same compact size for transmitter and receiver, with NP-F DV plates and new high gain antennas.

Anti-interference Transmission

With built-in wireless frequency scanner, the system will automatically jump to a best wireless channel from 5.1 to 5.9GHz, based on current surroundings, to ensure a reliable and anti-interference transmission.

You can also switch the wireless channels manually.

The OLED displays video format and wireless signal strength.

Support DFS (Dynamic Frequency Selection)

Strong Wall-Cross Performance

Featured stronger wall-cross performance that will keep video transmission without data lost or crash comparing to regular 5GHz wireless transmitters.

Multicast and Double Encryption

Support 1 transmitter to 4 receivers reliable multicast mode. The transmitter and receivers are paired and double encrypted by private transmission protocol and by AES128, in order to protect the footages.

Reclock and Color Reproduction

To ensure the quality of black level, signal noise and color reproduction of the wireless received signal, the Flow series wireless receiving supports signal re-clock and accurate color reproduction.
