

#splitdiopter: Split filter, double focus Focuses both fore- and background

Description

Precision-cut, semi-circular diopters mounted in a ring. Capture the foreground with the diopter and the background through the uncovered half to get two planes of focus.

Application

Attracts the viewer's attention to an object in the background while the main scene remains focused or vice versa. Creates moods unconscious to the viewer. Dioptr Split is also ideal for shots in low light and/or indoors, as the iris does not need to be stopped down to increase depth of focus.

Key Features

- Creates second area of focus
- Usable in compatible matte boxes
- No exposure compensation
- Broadband coating (BBAR)

Sizes

138 mm Drop
4.5 inch Drop
